along with

GEOProcessing 2017, March 19 - 23, 2017 - Nice, France

The Ninth International Conference on Advanced Geographic Information Systems, Applications, and Services

<http://www.iaria.org/conferences2017/GEOProcessing17.html>

The special track deals with data fusion techniques for geographical data. Data obtained from different sources complement each other and provide more thorough information to the end user. Data fusion techniques gain increasing interest while geoprocessing data for earth observations.

Topics encompass, but are not limited to:

- Bayesian Inference
- Dempster-Shafer Evidence Theory
- Fuzzy Sets
- Neural networks
- Application of data fusion for earth observation: urban landscape monitoring; geological applications; hydrological models; climate models; target detection.
