along with

ICCGI 2017, July 23 - 27, 2017 - Nice, France

The Twelfth International Multi-Conference on Computing in the Global Information Technology

<http://www.iaria.org/conferences2017/ICCGI17.html>

Since the last 20-25 years we've been witnessing a flourishing of hypotheses and concepts which try to account for new economic phenomena activated by the digital economy. These include (the list is not exhaustive): wkinomics, reputation economy, sharing economy, experience economy, relationship economy, access economy, gift economy, creative economy, gig economy. In their multidisciplinary and qualitative approach, they appear far removed from the mainstream of economics, which is still firmly anchored in the industrial 'physical' world.

General topics:

- Could the fast-paced digitalization of economic activity force the old economic paradigms to be abandoned and scrapped?
- Is the digital economy writing its own version of new (digital) economics and would (may we speculate) similar profound changes occur in other scientific disciplines?
