INTELLI 2017, July 23 - 27, 2017 - Nice, France
The Sixth International Conference on Intelligent Systems and Applications
http://www.iaria.org/conferences2017/INTELLI17.html

Intelligent systems have particular potential and strengths to support decisional situations faced by industry and companies, especially those of a strategic nature, where good strategic intelligence is necessary. Such a prospect warrants a reflection on the modus operandi of the intelligent systems in the industrial control and monitoring areas.

Do smart factory lead to a better understanding and design of production and manufacturing systems? Could smart factories help to revitalize industry manufacturing? This track outlines application of intelligent techniques to manage industrial processes.

Topics include, but not limited to:

- Industry 4.0 an autonomous and unattended schemes
- Intelligent systems in the autonomous production process: product conception level down, manufacturing, modeling, and maintenance
- Digital factories like representation of manufacturing systems in a virtual environment
- Intelligent systems to improve the management efficiency utilities
- Intelligent industry and virtual representation of a factory to facilitate the distributed management of manufacturing assets
