along with

PESARO 2018, The Eighth International Conference on Performance, Safety and Robustness in Complex Systems and Applications

April 22, 2018 to April 26, 2018 - Athens, Greece

<http://www.iaria.org/conferences2018/PESARO18.html>

Machine learning algorithms are currently a hot topic in research and development for academic and industrial teams. The roots of these algorithms reach even back to the seventeenth century where Bayes theorems were published. However, since this time, changes in the application domains as well as the target hardware platforms have led to an increased interest in these techniques. Domains like automotive, process automation etc. reach out for these methods and already deploy systems exploiting machine algorithms, e.g., for image processing and scene analysis. This means, machine learning met the Embedded System domain where almost endless possibilities for the deployment of these algorithms can be found. Trends like the Internet of Things and Cyber-physical Systems even underline the demand of these novel techniques.

Prospective authors are invited to submit original papers on topics including, but not limited to:

- Machine learning
- Image processing
- Signal processing
- Reconfigurable hardware
- Deep learning
- Automotive safety
- Cyber-physical Systems
