This special track focuses on new and exciting research in intelligent sensors and sensor fusion from various domains like automotive, healthcare, biomed, MEMS, military applications, sports, smart cities and so on by combining data the right way to process accurately and reliably.

We also welcome experiences from application specialists and the commercial community. The primary goal is to exchange and discuss research opinions, ideas, research findings across academics, industry and government.

The topics encompass, but not limited to:

- Smart Sensing: Sensor data networking (adaptive and sustainable), sensor data cloud computing, sensor data fusion, crowdsourcing in different domains
- Applications: IoT (Internet of Things) applications; Machine learning, spatio-temporal data mining techniques to process sensor data; Computational Intelligence
- Systems: Architectures supporting smart sensing technologies and performance evaluations
- Security and Privacy: Concerns, challenges and solutions.
