Special track

N&E: Networks and Education

Prof. Dr. Ralucca Gera, Naval Postgraduate School, California, USA
rgera@nps.edu

Traditional education places all the students through the same topics, at the same time, at the same speed, generally teaching to the average student. But such a system leaves some students behind, and fails to challenge others. Traditional education also produces similar skilled graduates, not enhancing the different skills, abilities, and interests learners might have. Unlike most established sciences, new research fields hint at non-traditional methods of education based on AI (Artificial Intelligence).

The current track aims at bringing together researchers from different areas of social analytics to present revolutionary ideas for education based on human and social analytics. The proposed education can be classroom formal and information, from elementary school to post-graduate education.

Topics include, but not limited to:

- AI based education
- Learner profile based education
- Data-driven and knowledge-based methods for analysis on education
- Relation between pedagogy/andragogy and social networks
- Multimodal and hybrid approaches to education
