Brandenburg University of Applied Science

Olga Levina

Olga received the diploma degree (Diplom, an equivalent of the Master's degree) in industrial engineering and management from Technical University of Berlin, Germany in 2007. She received her PhD in information systems from Technical University of Berlin in 2012. She was a PostDoc researcher and project manager at Technical University of Berlin until 2015 and at FZI Research Center for Computer Science in Berlin from 2016 until 2020.

Her research interests are focused on digital platforms, digital transformation, business processes and ethical aspects of digital transformation.

She is currently professor for business process management at the Brandenburg University of Applied Science.

Some aspects for ethical challenges in STIS design- The cost of the service philosophy

Challenges for STIS and Information Systems Research (ISR)

- ⇒ Mitigate the costs of the service philosophy through user-centric MLS design.
- ⇒ Information Systems Research (ISR) should pursue practices for the creation of IT artifacts that are not only technically innovative but also socially acceptable.
- ⇒ ISR toolbox should be expanded with tools that balance the technical possibilities and the user needs.
- ⇒ Ethical compliance of an IT-system is an integral part of the design process, as well as the product use.
- ⇒ Focusing on the user and the affected user in MLS context is a unique market feature.

Challenges for STIS design: Research areas and questions

Modeling STIS

Data requirements for STIS

Design principles of socially-aware MLS

Testing and evaluating of STIS

STIS interaction patterns

STIS influence on user behavior

Process descriptions for STIS

Performance indicators for STIS
