

Title: Cooperation with the education sector

Presenter: Ivona Spurna, Marketing Manager at MICRORISC and IQRF Alliance

Description: IQRF Smart School program, it is a program that aims to connect educational institutions with the professional sector through the IQRF Alliance community. In the alliance, we organize a number of activities and events in which teachers and students can also participate and thus better connect with the commercial sector. They cooperate in joint projects, often supported by European funds, and students often gain the opportunity to practice in companies focused on IoT. For teachers who want to teach IQRF technology, include it in their teaching, we provide free training and consultations so that they can do everything in the shortest possible time. When some interesting projects are created at university or high school, we help them with a promotion in the IQRF Alliance. Some projects will be presented in this presentation.

In the IQRF Alliance, we also welcome young companies and help them get started. We have a Startup program that allows these companies temporary membership in this community. They can meet other members, get free training, start preparing their IoT product, certify it for IQRF Interoperability, promote it on the IQRF Alliance Marketplace and sell it on the iqrif shop. Some outcomes of selected startups will be shown.

Learning outcomes

- Understanding IQRF Smart School program
- Understanding IQRF Start Up program

Tutorial structure

- Relationship between the educational and commercial sector
- Conditions of IQRF Smart School program
- Examples of successful projects at universities
- IQRF Start Up program
- Examples of successful products and solutions of selected startup companies

Duration: 12 minutes

Audience: interested in IoT issues, students and teachers of high schools and universities, startup companies, companies looking for innovation and innovative partners
