

## **Connecting Product Management and Software** Architecture – Challenges for the Digital Transformation

PD Dr. Christoph Knieke / Prof. Dr. Andreas Rausch

Technische Universität Clausthal Institute for Software and Systems Engineering Clausthal-Zellerfeld, Germany Email: christoph.knieke@tu-clausthal.de, andreas.rausch@tu-clausthal.de

ComputationWorld 2021, April 18-22, Portugal

- 2004: Diploma in computer science
- 2011: Doctoral degree
- 2019: Habilitation degree
- Lecturer and post-doctoral researcher at TU Clausthal
- Leader of research group "Requirements, Architecture and Lifecycle Engineering at TU Clausthal
- Leader of several R&D projects, e.g., together with Volkswagen AG
- Organizer of special tracks at IARIA conferences
- Research interests:
  - Model-based systems engineering (MBSE)
  - Domain-specific modeling languages
  - Software product line engineering
  - Architecture evolution

PD Dr. Christoph Knieke

#### Contents

- 1. Initial Situation: Platform Strategy in Automotive Industry
- 2. From Software Sharing to Software Product Line Architecture and Product Management Challenges
  - 1. Modelling of Requirements and Design Artifacts
  - 2. Variability and Configurability
  - 3. Traceability of all Development Artifacts
  - 4. Lifecycle Management
- 3. Our Approach: Connecting Product Management and Software Product Line Architecture
- 4. Under the Hood: Concrete Modelling Approach Illustrated by Example
- 5. How to Cope with the Challenges of the Digital Transformation

# Platform Strategy – A Well-known Successful Approach in Automotive Industry

- Manufacturing of product families based on platforms since the 1960s
- High number of variants
- High degree of reuse

#### Software Sharing: A Platform Strategy for Software

#### Benefits of Software Sharing

- Increasing of reusability
- Protecting the core know-how
- Saving of development costs
- Increasing of quality

#### Software Sharing = Essential Part of Platform Strategy + Success Factor!

#### Variability in Software Modules = Key Concept in Software Sharing

#### Configuring the Negative Variability

- By "switches" in the code, preprocessing code is deleted
- Attention (partly compiler dependent):
  - Compilers can leave dead code in the program
  - Optimizing compilers can delete dead code
- Further parameter values set during application

#### Contents

  - 4. Lifecycle Management
- 3. Our Approach: Connecting Product Management and Software Product Line Architecture
- 4. Under the Hood: Concrete Modelling Approach Illustrated by Example
- 5. How to Cope with the Challenges of the Digital Transformation

## Introduction to Software Product Line Engineering (SPLE)

- Domain Engineering: Define and realize the commonality and the variability of the software product line.
- Application Engineering: Deriving product line applications from the platform.

Current Status: Use of SPLE in the Automotive Domain

Challenge: Modelling of Requirements and Design Artifacts

#### Challenge: Variability and Configurability

### Challenge: Traceability of all Development Artifacts

#### Challenge: Lifecycle Management

### Contents

- 1. Initial Situation: Platform Strategy in Automotive Industry

#### Importance of Architecture: Real World Example "Longitudinal Dynamics Torque Coordination"

### Importance of Architecture: Real World Example "Longitudinal Dynamics Torque Coordination"

• Some facts about the power train software system:

Element Type*	Count (in 2015)
Projects (versioned)	6.533
Modules (versioned)	21.734
Element Type** (Project Example: MC6)	Count (in 2017)
System constants (SC)	~18.000
Application parameters	~80.000

\*Source: ADD

\*\*Source: DCM, CSV

#### Importance of Architecture: Real World Example Introducing new Architecture Concepts

- High cohesion
- Loose coupling

#### Enabling Traceability between Requirements and Architecture

• According to ISO 26262: Documentation must be delivered traceable:

- Effort for maintaining traceability between requirements and architecture
- Effort for delimitation of changes

![](_page_23_Figure_7.jpeg)

![](_page_24_Picture_0.jpeg)

In
an

![](_page_24_Picture_2.jpeg)

#### Example: Steering System at Volkswagen

- Initial situation: Development of a release of a new steering system finished
- No traceability between requirements and architecture
- According to ISO 26262: All traces between 8.000 requirements and 200 modules had to be set manually (Ø 1.000 LOC per module)
- Effort: 50 person-years, Costs: 15 Million EUR (incl. costs for 9 month delay of SOP)
- For comparison: Estimated effort, in case the traces had been set before product realization: 15 person-years (1,5 Million EUR)

In case of a new product development, traces have to be set again!

![](_page_29_Picture_0.jpeg)

![](_page_29_Picture_1.jpeg)

#### Challenges in Product Management and Software Product Line Architecture

- Scalable modelling approaches supporting variability
  - on requirements level, e.g., feature trees
  - on design level, e.g., SPLA
- Variability and configurability, e.g.,
  - determination of variability decisions propagated on domain level
  - derivation of artifacts on product level
  - derivation of traces on product level
- Providing and maintaining traceability, e.g.,
  - between feature tree and requirements
  - between requirements/features and SPLA
  - between SPLA and code artifacts
- Lifecycle management between domain / application engineering

  - 4. Lifecycle Management
- 3. Our Approach: Connecting Product Management and Software Product Line Architecture
- 4. Under the Hood: Concrete Modelling Approach Illustrated by Example
- 5. How to Cope with the Challenges of the Digital Transformation

Importance of Modelling: Real World Example BSU – "Brake Servo Unit Software System"

- Main task: Ensure a sufficient vacuum within the brake booster that is needed to amplify the driver's braking force
  - Intake manifold as vacuum generator,
  - or electrically / mechanically driven vacuum pump

- Before 2012: Implemented by various suppliers, no modeling of architecture
  - Monolithic structure; variability realized completely by annotations; strong coupling and a low cohesion; ...
  - →High accidental complexity

![](_page_34_Picture_8.jpeg)

![](_page_34_Picture_9.jpeg)

![](_page_34_Picture_10.jpeg)

![](_page_35_Picture_1.jpeg)

### Fragment-based Software Architectures for Product Lines

- Objective: Linking between features and components
- Challenge: Assignment of feature to component not unique
- Fragment-based solution approach: Automated generation of componentbased architectures from feature-oriented product lines

![](_page_35_Figure_6.jpeg)

![](_page_36_Picture_0.jpeg)

![](_page_36_Picture_1.jpeg)

### Fragment-based Software Architectures for Product Lines

 Example: The feature implementations of a group are merged into one architecture.

![](_page_36_Figure_4.jpeg)

#### Importance of Modelling: Real World Example BSU

- In 2012: New in-house development by Volkswagen and IPSSE
  - Implementation on the basis of the documentation of the existing systems
  - Quality targets: Configurability, extensibility and comprehensibility
  - $\rightarrow$  Modelling of new architecture and design concepts

![](_page_37_Figure_7.jpeg)

![](_page_37_Picture_8.jpeg)

![](_page_37_Picture_9.jpeg)

![](_page_37_Picture_10.jpeg)

![](_page_38_Picture_0.jpeg)

![](_page_38_Picture_1.jpeg)

#### Importance of Modelling: Real World Example BSU Results of the Case Study (2012-2016)

		Count in 2012	Count in 2016	Number of versions	Average number of versions
Logical architecture elements		10	15	15	1
Module architecture elements		10	15	58	4
Projects		1	21	146	7
	Number of versions used in projects	Cumulated number of versions used over all project versions		Average degree of reuse of each version	Number of used design configurations
Module architecture elements	46	161 <i>°</i>	1	35	n/a
Projects	n/a	n/a		n/a	14

39 → Stable Architecture, High degree of reuse, High number of variants managed!

![](_page_39_Picture_0.jpeg)

![](_page_39_Picture_1.jpeg)

#### **Effective Tool Support is Essential!**

![](_page_39_Figure_3.jpeg)

![](_page_40_Picture_0.jpeg)

# An Experiment for the Configuration Mapping in Prolog...

- 400 lines of Prolog program
- 13 atomic features and feature configuration
- 15 atomic modules with more than 100 variability parameters
- Selection of hierarchical components via solution variables solution alternatives
- → First attempt: Works and parameters were reduced by a factor of 10 (higher factors likely due to cross effects)
