Special track

BAVC: Human Computer Interaction and Behavior Analysis Using Vision Cameras

Chair and Coordinator

along with
ACHI 2020, The Thirteenth International Conference on Advances in Computer-Human Interactions
https://www.iaria.org/conferences2020/ACHI20.html
June 21 - 25, 2020 - Valencia, Spain

Recently, state-of-the-art computer vision techniques have enabled the detection of facial and body features from an image. Many applications will have benefits from these techniques. The real time detection of facial features will lead to the observation of facial emotion changes and of facial muscle movements, which may be important aspects to behavior analysis. The detection of body features will enable an interaction between human and the computer. Moreover, these features can be potentially used for measuring body movements that plays important role in clinical management.

This special track invites researchers to publish their works related to human computer interaction and behavior analysis. These works may involve applications in robot developments, healthcare, interactive user interfaces, etc.

Topics include, but not limited to:

- Facial analysis
- Body motion analysis
- Behavior analysis
- Interactive human computer interaction
- Flexibility training
- Human tracking
- Movement analytics
- Special applications (healthcare, assistive-robotics, special interfaces, etc.)
