February 23, 2020 to February 27, 2020 - Lisbon, Portugal

This special track on the Solar Panels is targeting research and techniques on parameters including finding solutions for the soiling effects. These will help cleaning the Solar Panels and deal with the high temperature effects to cool the Solar Panels in order to increase their efficiency.

Topics include, but not limited to:

- Cleaning methods (increasing efficiency is by reducing the effect of soiling (i.e., dust covering the panel) and other particulate matter off of PV-panels)
- Reducing the negative effect of high cell-temperatures on the operation of PV-panels themselves (by keeping the panels at a cooler state using different methods)
- Soiling and High Temperature effects on different types of PV panels
- Weather parameters and the physical location of the PV-panels
- Maintenance methods and schedules
- Metrics for efficiency accuracy
