VEHICULAR 2020, The Ninth International Conference on Advances in Vehicular Systems, Technologies and Applications
https://www.iaria.org/conferences2020/VEHICULAR20.html
June 28, 2020 to July 02, 2020 - Athens, Greece

Driving simulators have gradually become a means of improving knowledge in the field of driving. The advantages linked to simulator studies are numerous: no real risk for users, reproducibility of situations, saving time and reducing experimental costs. Their flexibility also makes it possible to test situations that do not exist in reality or exist only rarely and randomly. Simulators also allow the evaluation of new driver assistance systems.

The purpose of this special session is to explore the latest research conducted in the use of simulators in the field of road safety. From the construction of the simulator to the tests carried out, the different methods used as well as the results obtained will be presented.

Topics include, but not limited to:
- Simulators design (Bicycle, Motorcycle, Vehicle)
- Vehicle dynamics validation
- Accidents analysis
- Road users behavior study
- Impact of road characteristics on road safety
- Drivers behavior study
