Education

- Ph.D. 2018-present; UBC
- M.S. 2013-2015; DU
- B.Sc. 2009-2013; DU

Skills

- Deep Learning
- UI design and front-end development
- Software development

Research

- Light Field (LF) Compression
- LF Refocusing
- LF Quality Metrics
- LF view synthesis

Work

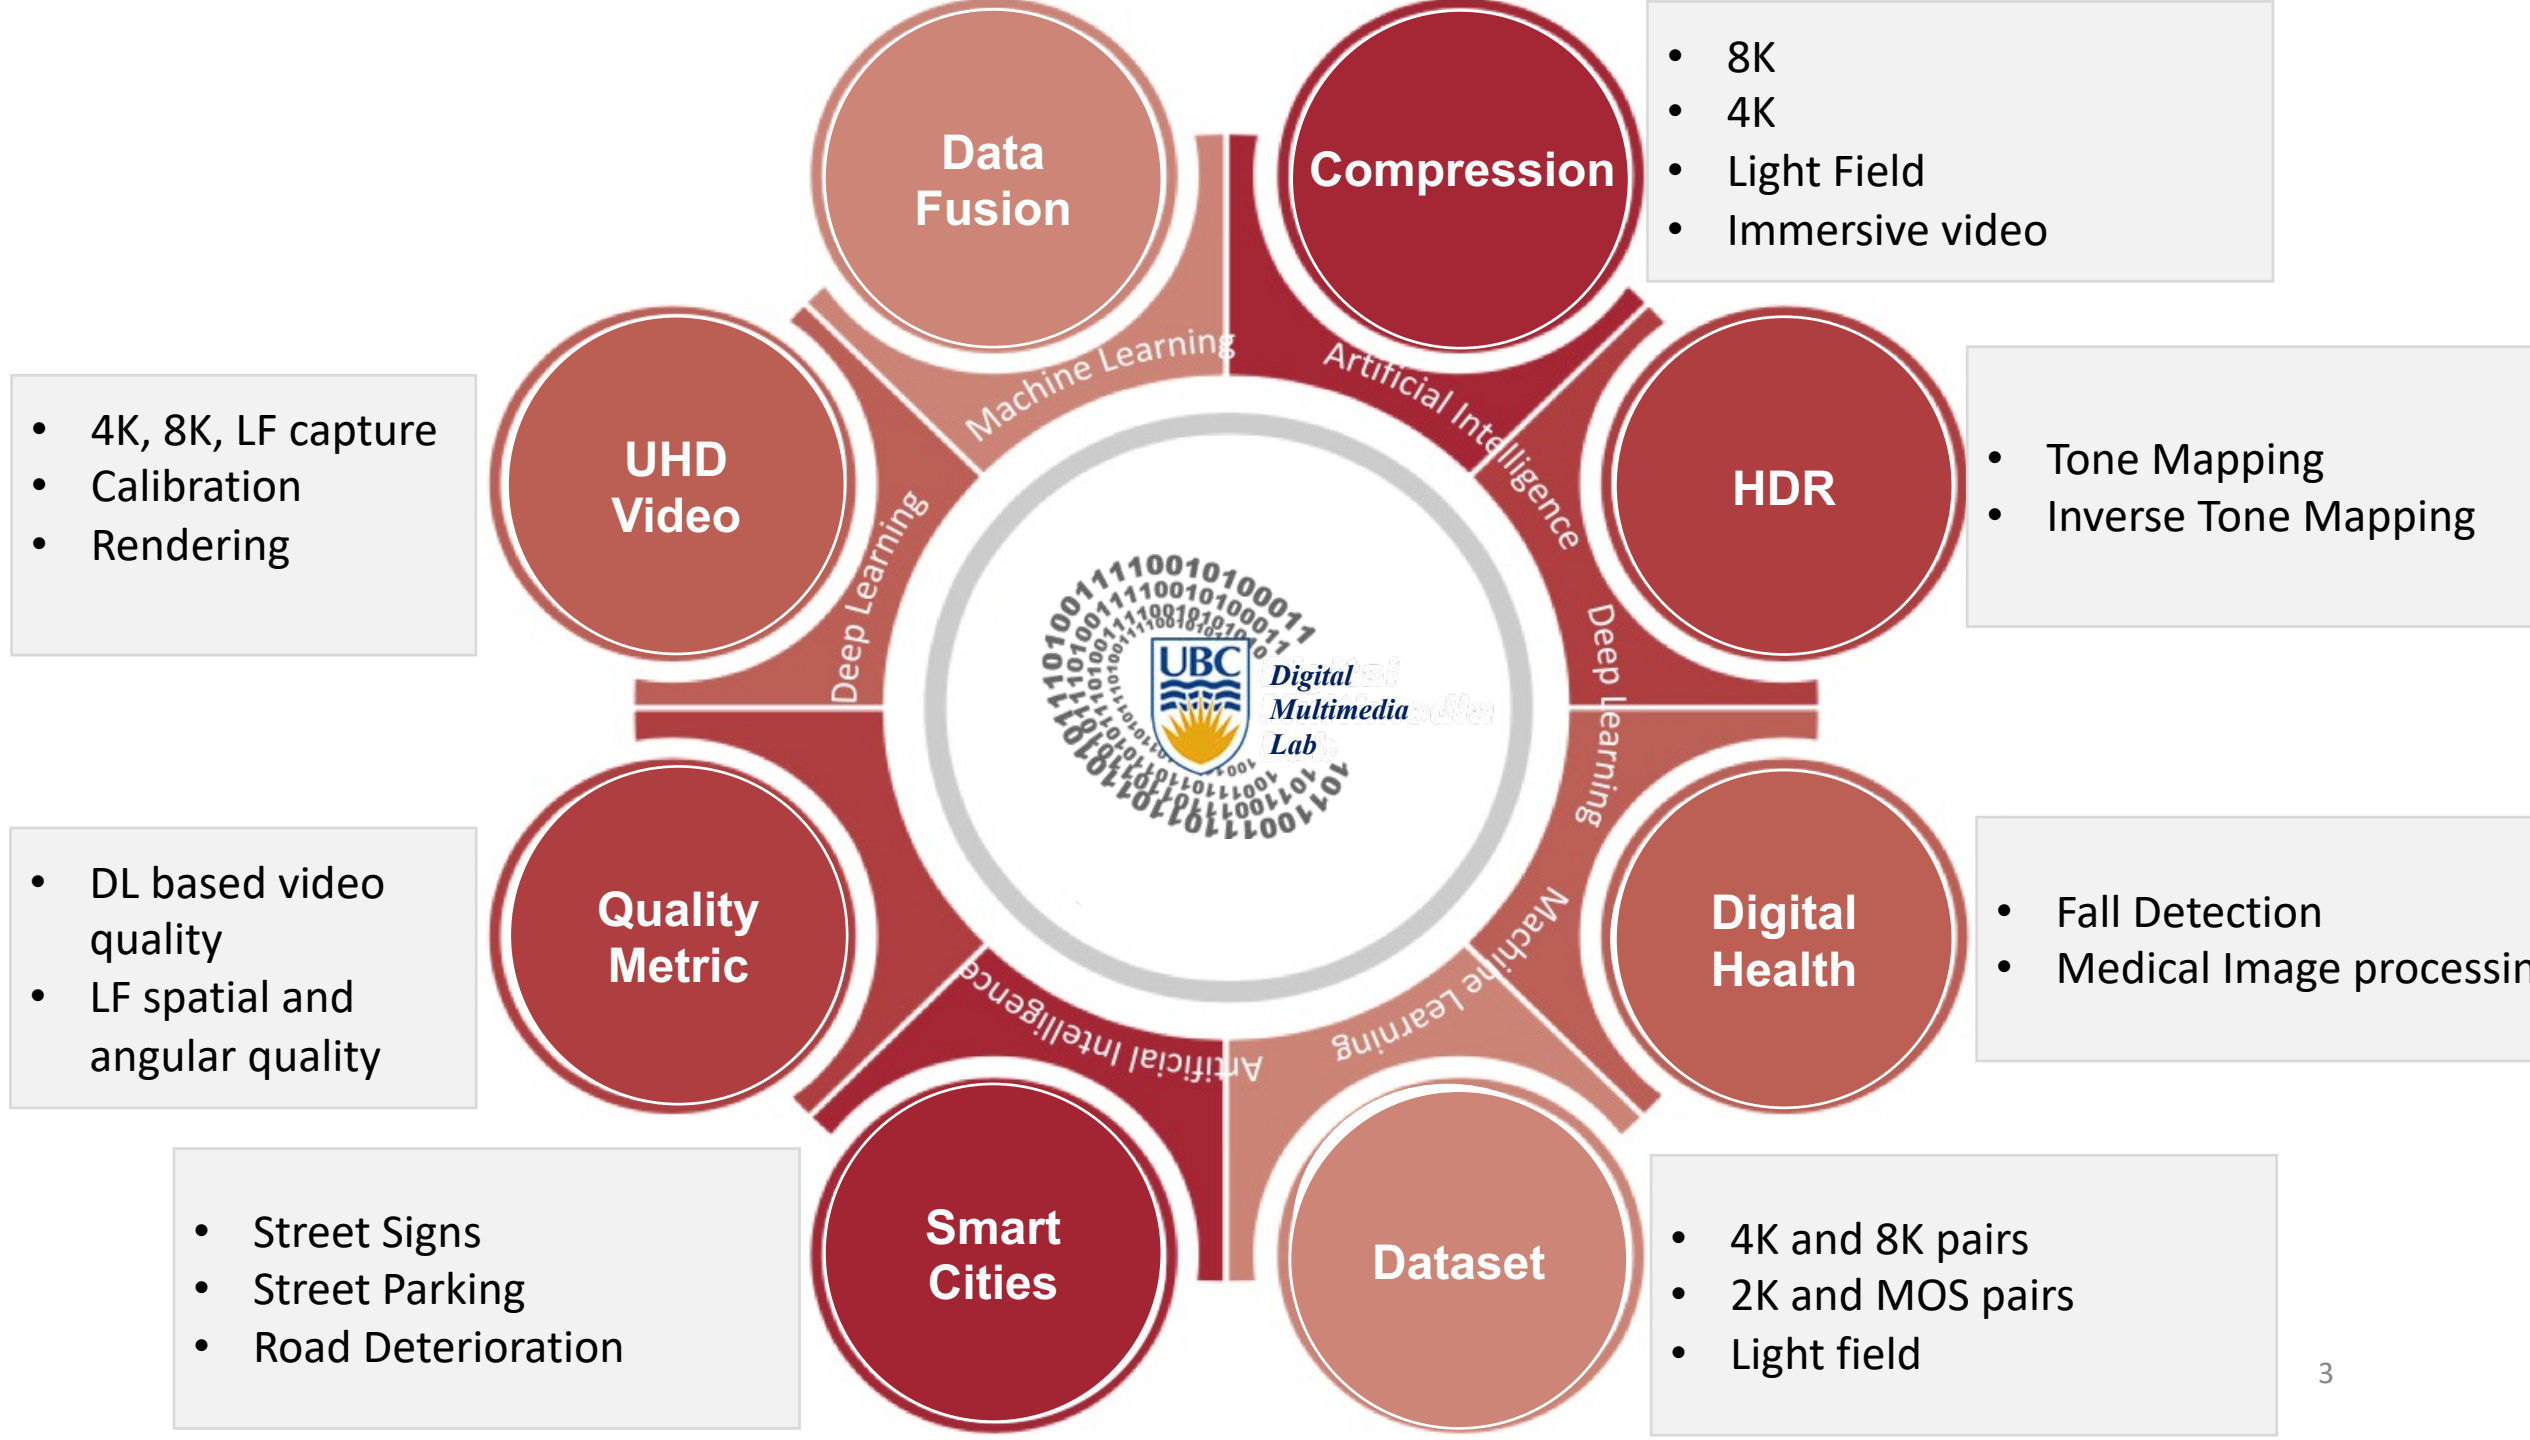

- Research Assistant; DML
- Teaching Assistant; UBC
- Lecturer; DU; BRAC U

Interests

- Internet
- Movies
- Travelling
- Cooking

Traditional Light Field Refocusing can only refocus on different depth planes

Traditional Light Field Refocusing can only refocus on different depth planes

Human vision focuses on objects in real world

**Our Objective:
Bring Light Field refocusing closer to human
perception**

User clicks on a pixel – pixel belonging to the OBJECT comes in focus

Object Segmentation

Refocused

Original

Enhanced Refocusing

Conclusion

- We developed a new LF LF refocusing system
- It is more consistent with human perception compared to existing state-of-the-art solutions

Confusion near the edge of refocused object

- Better labelling
- More training with extend dataset
- Blending

Thank You
