Cooperative Farming: Perspectives of patients, innovators, providers and others

● ● ●

All of us

IARIA

How new approaches to innovation can build more ready to implement tools utilizing emerging technology more likely to see successful deployment and adoption by enabling design stage cooperation among providers, patients, innovators and others.

"Digitization is about more than just the use of technology-above all, it's about a different way of working, and that requires vision, guts and leadership."

In the future, asking the right questions will be more valuable than finding answers. We are here to ask....

The ability to absorb new technologies has been described as being at the breaking point… what have you seen work in adopting of tech?

Q1

Budgets prove priorities...
In health systems, privacy, security and inclusiveness can only be properly addressed with a multidisciplinary approach.

How is this impacting our ability to leverage emerging tech in health care? Are you seeing the budgets? What are some success factors?

Equity: Consideration of equity and what that means is being given at every step in collaboration and design...

Are we leveraging emerging tech to build systems that support all of us?
How are you building in equity?

What are you seeing from a personalized medicine perspective?

Q4

How are we making things easier and better for our healthcare workers?
