

# PAge@Home – A digital Personal Agent for Chronically Sick in the Home Environment

Chris Schröer, Björn Naumann, Michele Haink, Nils Lahmann

Presenter: Chris Schröer

HCMB – Institute for Health Care Systems Management Berlin eG

Venice, Italy, April 14 – 18, 2024

# M. Sc. Chris Schröer

## Professional Experience:

- Doctoral Student at the University of Applied Sciences Münster
- Research Associate at HCMB – Institute for Health Care Systems Management Berlin eG

## Publications & Activities

- “Measurement analysis of the stress on the hand-arm system caused by torques when setting up haemodialysis machines”, Documentation of the 68th Congress of the Society for Labour Studies in Magdeburg, Dortmund: GfA-Press. A.4.5. ISBN: 978-3-936804-31-7
- “Measurement analysis of the stress on the hand-arm system caused by compressive forces when setting up haemodialysis machines“, 62nd Annual Scientific Conference of the DGAUM, Munich 2022
- “Expert evaluation of the safety and ergonomic design of hospital beds“, Documentation of the 69th Congress of the Society for Labour Science in Hanover Dortmund: GfA-Press. A.1.16.
- “Investigation of the influence of a fifth castor and the castor diameter on the force required to push hospital beds”, 63rd Annual Scientific Conference of the DGAUM, Jena 2023.

# Institute for Health Care Systems Management Berlin eG

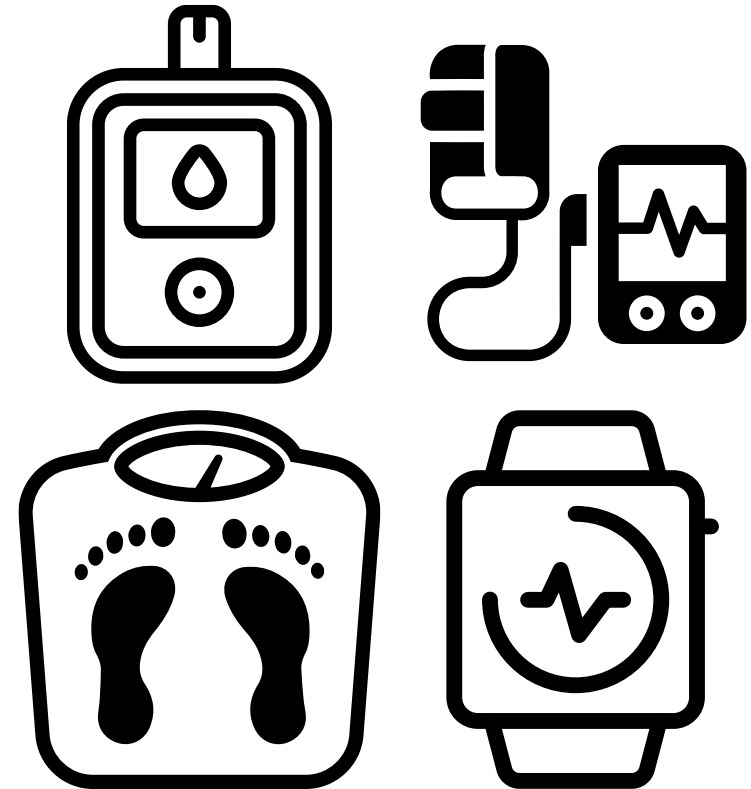

## Other Projects:

- „Stay@Home – Treat@Home“
- Evaluation of the technical and organisational feasibility of a tracking system for beds in the clinical area
- Workplace design for perfusionists
- Evaluation of the health benefits of an app for carers
- Evaluation of a digital care application (DiPA)
- Evaluation of the performance of see-through displays

→ For more information about the individual projects visit: <https://www.hcmb.org>

# Introduction

- Multiple health-related hardware and software for patients in the home environment are available
- Solutions are either certified medical products or products of the second health market
- In the most cases: Assessment of different data in different quality and for only one purpose
- Joint interpretation of the data hardly ever takes place

# Introduction

- Combination of the different systems to one common solution could give a more complete overview about the patient health
- A combined system with a telemedical connection that correctly detects critical health conditions could prevent:
  - Worse health effects,
  - And reduce hospitalisations

# Background

- Consortium consists of two **scientific** partners and four technology partners:

**nexus/ag**    **TERNARIS**

ID Information und  
Dokumentation im  
Gesundheitswesen  **QOLware**

# Background

# Overall Objective

- Development of a digital-connected health care system for chronically sick in the home environment
- Merging relevant data from different devices and recognition of critical health changes
- The system should integrate, validate and monitor all relevant patient data
- Subdivision of the main objective into four subobjectives

# Subobjectives

*1. Digital Support:*

*2. Digital Therapies:*

*3. Integrated Care Chain:*

*4. Structures of a digital health care:*

# Subobjectives

## 1. Digital Support:

- Development of a front-end, that allows a direct and inclusive access
- Ergonomic and accessible design

## 2. Digital Therapies:

## 3. Integrated Care Chain:

## 4. Structures of a digital health care:

# Subobjectives

## 1. Digital Support:

## 2. Digital Therapies:

- The Page should monitor the course of treatment, adjust the treatment to defined limits and set alarms (if necessary)

## 3. Integrated Care Chain:

## 4. Structures of a digital health care:

# Subobjectives

## 1. Digital Support:

## 2. Digital Therapies:

## 3. Integrated Care Chain:

- If an inpatient treatment is necessary:
- The PAge should accompany the patient through the care process
- Reduction of information loss between the care structures

## 4. Structures of a digital health care:

# Subobjectives

## 1. Digital Support:

## 2. Digital Therapies:

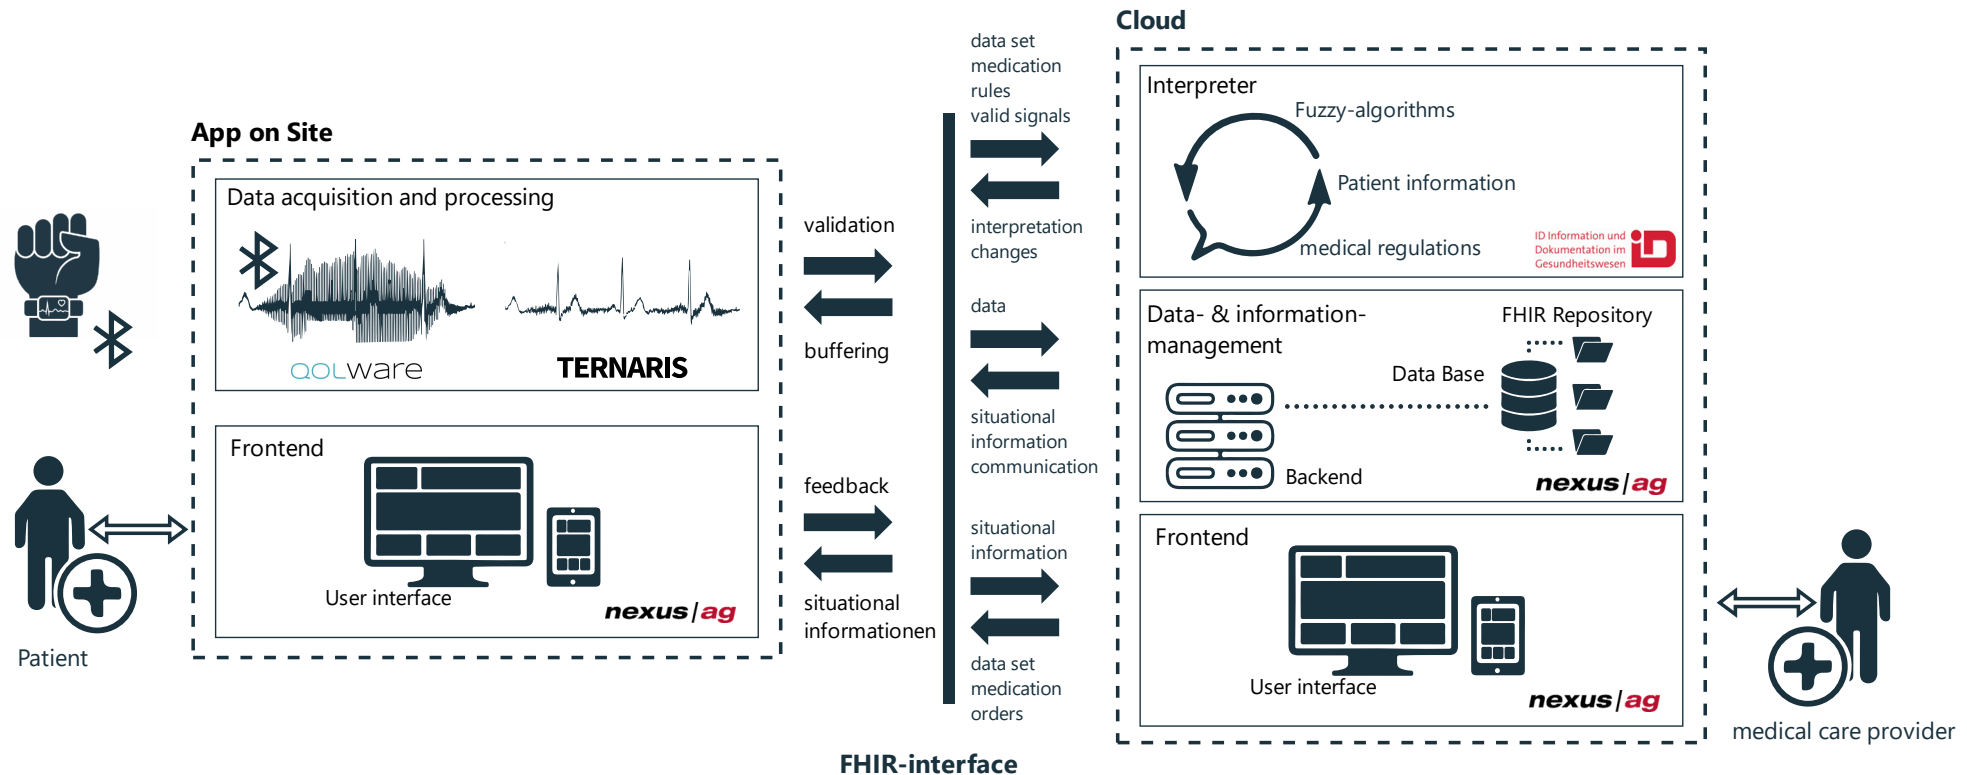

## 3. Integrated Care Chain:

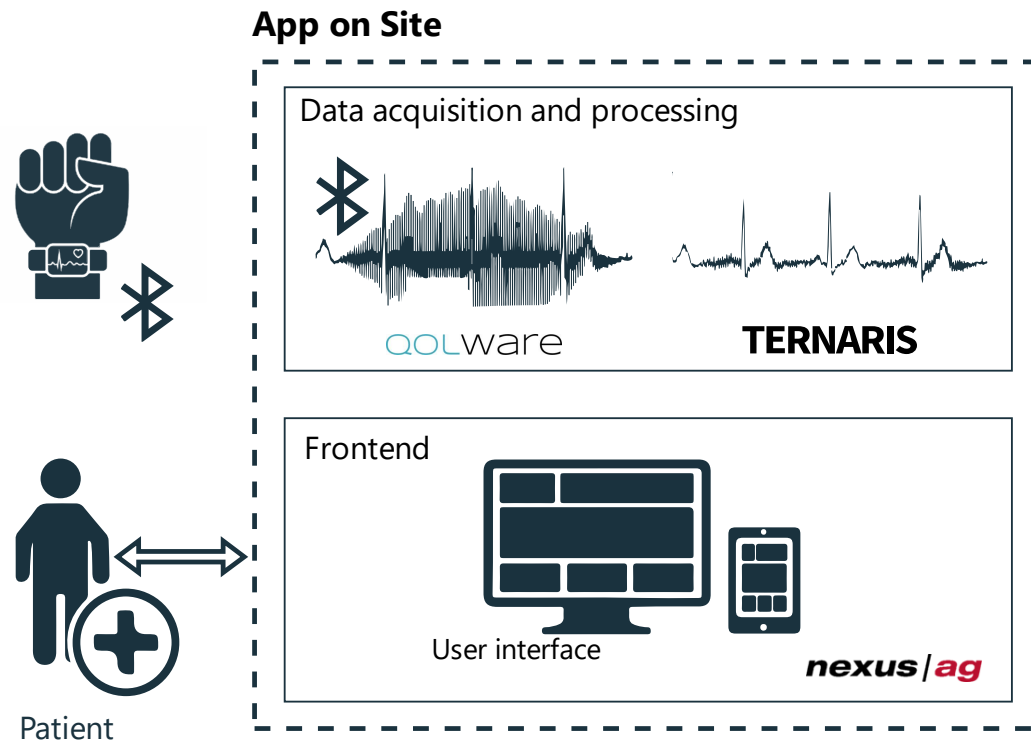

## 4. Structures of a digital health care:

- The PAge is open to other projects of digitalization
- It should be possible to integrate other medical technology solutions into the system

# Expected Results - PAge@Home

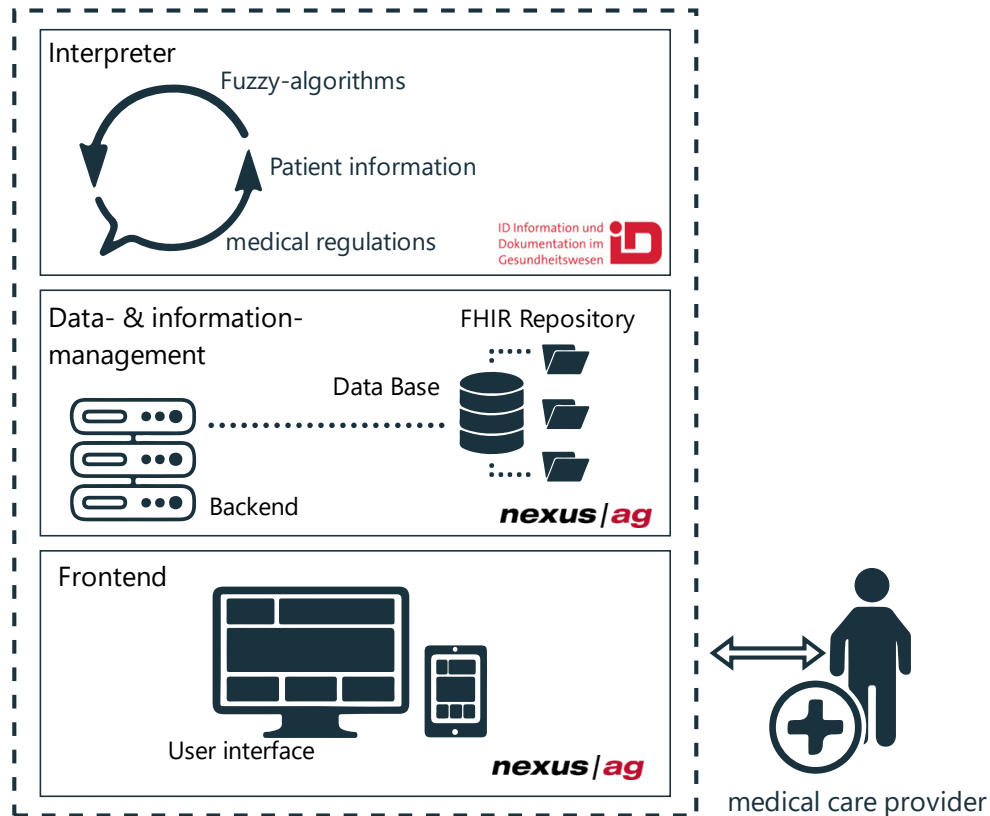

# Expected Results - PAge@Home

- A usable and user-friendly software for both patients and medical staff
- Multiple devices and wearables are integrated and merged into one system

# Expected Results - PAge@Home

## Cloud

- The data are assessed and saved on the backend in compliance with data protection requirements
- The artificial intelligence can interpret the data to detect pathological health changes
- Training concepts for the telemedical connection are created

# Outlook

- Project has been going on for about a year
- First smaller milestones have been achieved
- More results can be expected in this and the following year

HCMB eG.

## Acknowledgment:

The Project “Page@Home” is funded by the German Federal Ministry of Education and Research for a three-year period (02/2023-01/2026)
