group's first book:

Design 5.0 – The Role of Creative Professionals in the Digital Industry.

Creative Hackathons with GenAI

How Students Are Using AI to Develop Innovative Solutions:

We organized a series of 5 creative hackathons focused on hands-on experimentation with GenAI.

Given 4–6 hours, teams responded to proposed challenges with rapid ideas, including visuals, products, and campaigns.

The Power of Generative AI

03 in person events

02 remote events

Understanding the Power of GenAI in the Creative Industries

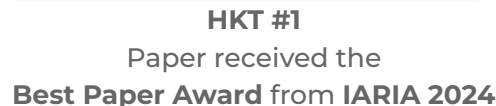

Research Questions:

- How do Generative AI (GenIA) tools impact the development processes of creative professionals?
- How are creative professionals currently using GenAI in their work?

Our work is in progress...

- 05 events realized (Hackathons)
 - The last one in person, in the U.S., with Brazilian Government support (me, 1 PhD, 2 MSc)
- 03 papers in writing
- 01 paper published
- 01 Master's Thesis (in progress)

Overview of Methodological Approach:

Research Characterization:

- **03 countries involved** | Brazil, USA, and Germany (or 04 if including the UK judge)
- **93 Participants** | 68 students, 16 judges, 9 staff people
- **05 cases studies** | 03 in person, 02 remote (03 Global, 02 national)
- **Longitudinal study** | From 03/2024 to 04/2025.
The study follows a longitudinal design adapted to the rapid evolution of AI.

Overview of Methodological Approach:

Research Characterization:

Qualitative Analysis | Main Data

Sources:

- Participant Observation
- Video Recordings
- Post-Event Student Survey (Google Forms)
- Jury Evaluation (scores and qualitative feedback during deliberations)

How do you evaluate the use of AI in these stages? *

How did it contribute (or not) to the process compared to the traditional approach?

Texto de resposta longa

In which stage of the process do you believe AI contributed the most to the project? *

☐ Immersion

☐ Definition

☐ Ideation

☐ Prototyping

☐ Outros...

How did the use of AI influence or change the initial direction of your idea? *

HKT EDITION Format/Date	#01   In person [Mar/24]	#02    Remote [Jul/24]	#03   In person [Aug/24]
CHALLENGE	<p>How to promote awareness about the preservation of the Amazon Rainforest?</p>	<p>1: Present a solution that promotes ergonomic health in work-from-home or office environments 2: Present a solution that can efficiently improve urban mobility</p>	<p>Create a campaign, visual piece, or artifact that represents a contribution to the education of the future.</p>
EXPERIMENT SETUP	<p>2 deliverables (JPG/GIF): 1 with AI & 1 without AI</p> <p>3 Brazilian jury members 11 students from UFSC</p>	<p>2 deliverables (JPG): 1 with AI at the beginning 1 with AI at the end</p> <p>3 Global jury members (DE, BR, UK) 6 students from Brazil (UFSC) 6 students from the USA (AAU)</p>	<p>2 deliverables (JPG): 1 with AI & 1 without AI</p> <p>3 Brazilian jury members 7 students from UFSC</p>
KEY FINDINGS & HIGHLIGHTS	<ul style="list-style-type: none"> - Students showed limited proficiency with GenAI tools. - Had difficulty writing prompts that matched their creative goals. 	<p>The difficulty with prompts persisted</p> <p>However, we observed that AI made the ideation process smoother and boosted creativity, especially in the final stages.</p>	<p>The difficulty with prompts persisted</p> <p>However, AI proficiency levels improved compared to the first edition</p>

CHALLENGE

Develop solutions that promote
Sustainability and Ecological Design

Develop solutions that contribute to the
preservation of the Amazon Rainforest

**EXPERIMENT
SETUP**

2 deliverables (JPG/PNG):
1 with AI & 1 without AI

3 Global jury members (BR, US, DE)
8 students from Brazil
12 students from Germany

1 deliverable (Presentation + Pitch Deck):
unrestricted AI use at all stages

4 Global jury members
18 students from the USA (AAU)

**KEY FINDINGS
& HIGHLIGHTS**

- In stage 2 (with AI), students refined more ideas.
- They tested more solutions compared to stage 1 (without AI).
- AI supported iteration and exploration

- More AI use in prototyping and pitching.
- Students felt more comfortable using AI tools.

Hackathon #1 UFSC - In Person [Mar/24]

Without GenAI

Hackathon #3 UFSC - In Person [Aug/24]

Without GenAI

With GenAI

UFSC & RheinMain - Remote

Hackathon #5 UFSC - In person [Apr/25]

Our Initial Qualitative Findings:

General Observations:

- Students **progressively demonstrated greater familiarity** with GenAI tools. However, challenges in **prompt** formulation still persist;
- When groups or pairs start using **AI from the very beginning**, they tend to face **difficulties in achieving originality**.

Our Initial Qualitative Findings:

General Observations:

- Groups or pairs that used **AI mainly during the refinement stage** reported greater efficiency and **higher final quality**;
- Defining the **final solution remains the most challenging stage**;
- Most frequently mentioned tools:
ChatGPT, MidJourney, Firefly, and Sora.

TABLE 01

ID	Alignment with the theme	Visual Communication	Originality and Innovation	Final Grade	Categoria
10	4.7	4.3	3.7	12.7	Started without GenAI
06	5.0	4.0	3.0	12.0	Started without GenAI
03	4.0	3.7	4.0	11.7	Started with GenAI
09	4.3	4.3	2.7	11.3	Started with GenAI
02	4.3	3.7	2.3	10.3	Started without GenAI
07	3.0	4.0	3.3	10.3	Started without GenAI
12	4.3	3.3	2.0	9.7	Started without GenAI
05	3.3	1.7	3.7	8.7	Started without GenAI
11	4.0	2.7	2.0	8.7	Started with GenAI
08	4.3	2.3	1.7	8.3	Started with GenAI
01	2.0	2.0	3.3	7.3	Started with GenAI
04	3.0	1.3	2.7	7.0	Started with GenAI

Our Initial Qualitative Findings:

Regarding the judge scores:

- The "**Originality and Innovation**" category contributed the most to the winning solutions
- "**Visual Communication**" showed higher performance in the solutions that integrated GenAI throughout the entire process or specifically during the final stages
- The "**Theme Alignment**" criterion showed consistently high scores across all solutions, regardless of GenAI involvement

Our Initial Qualitative Findings:

Projects **without GenAI** showed greater variability (with results at both: the highest and lowest score ranges).

With AI
vs
Without AI

In contrast, projects **with GenAI** had **more consistent performances**:

- **Most performances with Gen AI were near the overall average** (when considering both with AI and without AI).
- However, when **analyzing them separately**, projects **with AI** showed a modestly higher average compared to those **without AI**.

TABLE II. AVERAGE SCORE OF JURY'S EVALUATION

Jury Evaluation	
Average Grade	Category
8.4	Without AI
6.8	Without AI
6.2	With AI
6	With AI
6	With AI
5.5	Without AI
4.6	Without AI
5.7	With AI
5.7	With AI
5.3	Without AI

HKT #1
IARIA Paper (2024)

Our Initial Qualitative Findings:

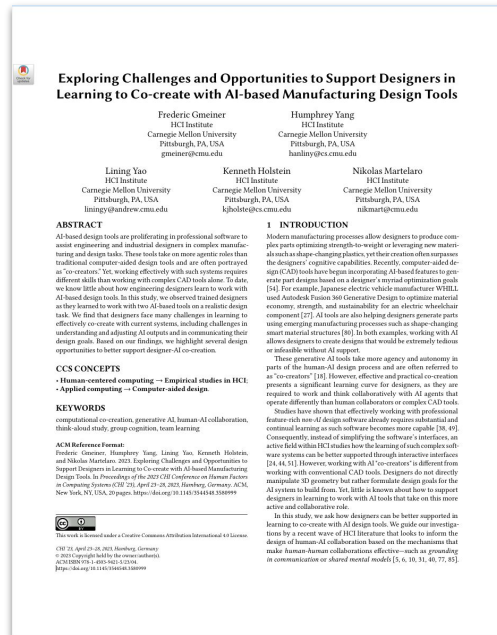

AI -beginning use
VS
AI at the end

Projects that used AI **mainly during the final stages** tended to receive **higher evaluations**.

AI as Co-Pilot

Projects that used **GenAI as a co-pilot** (complementing human skills) **achieved above-average performance**.

Co-creating with AI as a
co-pilot/CAD enhances
designers' performance
Gmeinder et al (2025)

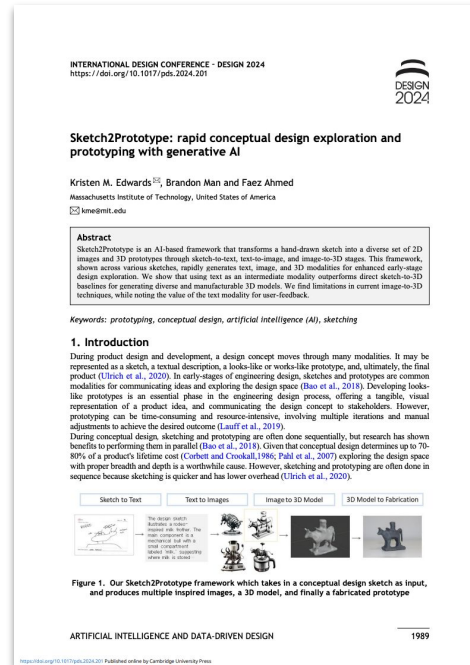

First Comparison with Existing Literature:

Cumulative Findings by Our Research Group (Hackathons & Beyond):

1. AI accelerates design from draft ideas

AI tools like Vizicom.ai and Adobe Photoshop can turn sketches into structured models instantly.

This helps creative professionals analyze and refine their ideas quickly, comparing them to existing market solutions.

Edwards, Man & Ahmed (2024)

presents a pipeline that transforms:

sketches > text descriptions > images > 3D models

Demonstrates how this multi-format conversion supports:

- rapid exploration of ideas
- iterative design processes
- enhanced creative flexibility

First Comparison with Existing Literature:

2. Fluency in AI Boosts Creative Velocity

As creative professionals become more familiar with AI tools, they gain more control over the creative process, pushing their ideas closer to innovation.

Beyond Automation: How UI/UX Designers Perceive AI as a Creative Partner in the Divergent Thinking Stages

Abstract

Divergent thinking activities, like research and ideation, are key drivers of innovation in UI/UX design. Existing research has explored AI's role in automating design tasks, but leaves a critical gap in understanding how AI specifically influences divergent thinking. To address this, we conducted interviews with 19 professional UI/UX designers, examining their use and perception of AI in these creative activities. We found that in this context, participants valued AI tools that offer greater control over ideation, facilitate collaboration, enhance efficiency to liberate creativity, and align with their visual habits. Our results indicated four key roles AI plays in supporting divergent thinking: aiding research, kick-starting creativity, generating design alternatives, and facilitating prototype exploration. Through this study, we provide insights into the evolving role of AI in the less-investigated area of divergent thinking in UI/UX design, offering recommendations for future AI tools that better support design innovation.

In *CHI Conference on Human Factors in Computing Systems* (CHI '25), April 28-May 1, 2025, Yokohama, Japan. ACM, New York, NY, USA, 12 pages. <https://doi.org/10.1145/2706068.3713500>

1 Introduction

In today's rapidly evolving digital landscape, User Interface and User Experience (UI/UX) design play a pivotal role in shaping user interactions, significantly influencing product success and overall user satisfaction [15, 16]. A critical component of the UI/UX design process is divergent thinking, which involves exploring a wide

range of ideas and solutions to drive innovation and creativity [13]. Different from convergent thinking, which prescribes operations to help achieve "a single correct solution" [12], divergent thinking "allows one to explore in different directions from the initial problem state, in order to discover many possible ideas and idea combinations that may serve as solutions" [12]. While both aspects are important in UI/UX design [9], divergent thinking allows designers to break free from conventional patterns and explore novel approaches to problem-solving, a process vital for tackling the current friction between rapidly advancing technology and limited design innovation [14, 47].

Over recent years, the integration of artificial intelligence (AI) tools into various stages of the UI/UX design process has become increasingly prevalent. These AI tools offer new possibilities for ideation, prototyping, and refinement [26, 30, 37, 39, 40]. Recent research has also significantly advanced our understanding of AI's role in the design process. For instance, Zhou et al. [49] demonstrated AI's potential to enhance both the depth and breadth of design solutions through strategic integration points in the design process. Similarly, Chandrasekera et al. [5] illustrated how generative AI can boost creativity and reduce cognitive load, particularly within design education, underscoring AI's role as a co-creator in producing diverse and innovative design solutions. With the recent advancements of generative AI, many commercial tools also emerged to aid the UI/UX design process. For example, tools like ChatGPT streamline data collection and synthesis, while Midjourney, DALL-E, and Uizard assist in generating visual assets and prototypes. Additionally, Figma's AI plugins like Automator² improve workflows by automating repetitive tasks. Tools like Colormind² also offer creative inspiration through palette generation.

Despite the significant advancements in AI-assisted design, there remains a critical gap in understanding how professional UI/UX designers perceive AI in supporting divergent thinking, as well as their needs and desires in AI tools to help them create more innovative products. Moreover, while previous studies have explored AI's contributions to design iteration [40] and early-stage creativity [5], little attention has been paid to how AI tools are currently utilized during the divergent thinking phases in the actual design practice. To address this gap, our study deliberately focuses on this aspect and investigates three key research questions:

- RQ1: What are the current practices of UI/UX designers in the divergent thinking process?
- RQ2: How do designers use AI tools to support divergent thinking in the UI/UX design process?

- Generating diverse alternatives

- Accelerating the ideation process

- Enabling human control during idea refinement
