Crossroads of AI, Philosophy, and Abstraction

- Fernanda Eliott is the Principal Investigator of the ELBICA Research Lab and an assistant professor of computer science at Grinnell College.

- Dr. Eliott builds Artificial Intelligence (AI) systems that use cognitive inspiration and Reinforcement Learning (RL) techniques.

- Her overall goal is to develop state-of-the-art cognitively inspired computational approaches to understand where meaningful decisions come from and to enhance human-technology partnerships through the development of AI systems that promote inclusion and assist people.
